PRI REPORTING 2026

Essential FY2025 Actions to Strengthen 2026 Performance

Key 2026 PRI indicators linked to 2025 activity

A meaningful share of PRI's 2026 reporting indicators assess p**rogress made during the reporting year** or **activities conducted in 2025.**

Signatories should prepare to report on 2025 activity in the following areas:

- Climate metrics used during investment analysis
- Public disclosure of climate metrics
- Human rights due diligence
- Collaboration & stakeholder engagement
- Progress against objectives and targets

Year-end actions can still bolster your 2026 PRI response.

Verability

Leadership accountability for 2025 progress

PRI's updated framework replaces the former Senior Leadership Statement with three indicators under senior leadership accountability (SLA 1–SLA 3).

SLA 2 responses should:

- Demonstrate progress made during 2025 on the most material responsible investment issue (SLA 2)
- Reflect on challenges and actions taken during the reporting year

December 2025 activity can support 2026 responses on senior leadership accountability.

Verability can design pragmatic, targeted actions to support year-end progress

Verability

Climate metrics applied and disclosed in 2025

PRI's 2026 reporting focuses on how signatories applied and disclosed climate-related metrics throughout 2025.

The 2026 framework includes two indicators asking signatories to report:

- Which climate-related metrics, if any, were applied during investment analysis in 2025
- Which climate metrics, if any, were publicly disclosed during 2025

If no metrics were used or disclosed, signatories are required to provide an explanatory narrative.

PRI's 2026 reporting emphasizes the integration of climate metrics.

Verability can deliver climate assessments and content for public disclosure in 2025

Verability

Human rights assessments and monitoring in 2025

The 2026 framework asks signatories to report the steps taken in 2025 as part of human rights due diligence, including whether they:

- Assessed potential or existing investments to understand connections to negative human rights outcomes
- Took actions in 2025 to address actual or potential negative outcomes for people connected to investments

Signatories should prepare to describe human rights assessments and remediation activities from 2025.

Verability can complete a portfolio-level human rights assessment before year-end

Verability

Emphasis on collaboration moves from principle to practice

The 2026 framework asks signatories to report whether they engaged with stakeholders during 2025, and to indicate:

- Which methods were used (e.g., consultations, meetings, working groups)
- Examples of collaborative initiatives undertaken during the reporting year

PRI is looking for examples of real collaborative activity in 2025 — not just memberships.

Verability can design and identify credible year-end engagement opportunities

Verability

2025 Stewardship activities across asset classes

The 2026 framework asks signatories to provide example(s) of stewardship activities conducted during 2025 and to explain how those actions relate to stewardship objectives.

Prepare to draft a narrative on 2025 stewardship activities. The mandated response will be assessed in 2026.

Verability can implement targeted year-end actions to address 2025 stewardship indicators
